

DEVONTE HUCKLEBERRY

SOC Analyst Candidate

Calumet City, IL | 872-305-9189 | DevonteHuckleberry@gmail.com | <https://www.linkedin.com/in/devonte-huckleberry/> | Portfolio

SUMMARY

Cybersecurity student at Per Scholas Chicago with ten-plus years of self-taught IT experience and a background in physical security operations. Already comfortable with the tools a SOC runs on: Wireshark, Splunk, Linux, and TCP/IP analysis. Holds the Google Cybersecurity Professional Certificate and ISC2 CC. CompTIA Security+ and Splunk Core Certified User in progress. The physical security background isn't a detour. It built the habits that matter in a SOC: accurate documentation under pressure, clear escalation, and knowing when something is off before it becomes a full incident. Ready to bring that combination to a Tier 1 SOC role on day one.

TECHNICAL SKILLS

Operating Systems: Windows 10/11, Linux (Ubuntu, Kali), command-line administration

SIEM / Analysis Splunk (log ingestion, search, basic dashboards), Wireshark, Tcpdump

Networking TCP/IP, DNS, DHCP, packet analysis, basic network troubleshooting **Scripting / Data**

SQL (MySQL, BigQuery), Python (basic scripting), Bash

Security Concepts Log analysis, access control, identity management, vulnerability fundamentals, incident response

Ticketing Systems ServiceNow, Jira, Zendesk: logging, tracking, and escalating issues accurately **Documentation** Incident reports, risk assessments, knowledge base articles, policy documentation **Hardware** PC assembly, component replacement, peripheral setup, diagnostics

EXPERIENCE

Cybersecurity Student (Hybrid)

Per Scholas Chicago | May 2025 - Present

Full-time, employer-partnered cybersecurity training program. Hybrid schedule. Graduates placed at JPMorgan Chase, Accenture, Cognizant, and other enterprise organizations.

- Perform packet capture and traffic analysis using Wireshark on live lab environments. Can identify anomalous traffic patterns, flag suspicious connections, and document findings in a format ready for escalation.
- Work through hands-on Splunk labs covering log ingestion, SPL queries, and alert configuration. Able to run basic searches, filter noise, and surface events that warrant investigation.
- Apply the NIST Cybersecurity Framework and incident response lifecycle in lab scenarios. Understand where a Tier 1 analyst fits in the containment and escalation chain.
- Completing CompTIA Security+ and Splunk Core Certified User through the program. Both credentials map directly to the tools and frameworks used in a SOC environment.
- Maintain detailed lab notes and findings documentation. Brings the same documentation standard used in physical security operations into technical work.

Security Guard

Securitas Security Services USA, Chicago, IL | Apr 2024 - Sep 2025

- Monitored access control and CCTV systems across high-traffic corporate sites. Logged every anomaly, flagged anything that didn't fit the pattern, and escalated with full context. Same workflow a Tier 1 analyst runs on alerts.
- Managed credentialing and visitor screening for 100-plus daily visitors at corporate locations. Zero unauthorized access incidents recorded across the full assignment period.
- Coordinated with law enforcement and site management during incidents. Produced documentation that closed cases faster and held up under review.
- Assigned to priority client locations, including banks and financial offices, based on consistent performance and client trust.

Security Officer / Supervisor

Titan Security Group, Chicago, IL | Nov 2022 - Jul 2023

- Supervised security personnel across multiple sites. Standardized shift handoff procedures that cut coverage gaps by an estimated 30%.
- Monitored surveillance and access control systems daily. Documented anomalies that led to security protocol updates at two-plus client locations.
- Wrote incident reports and risk assessments that fed directly into client security reviews. The reporting format was adopted as the site-wide template.
- Primary liaison between site personnel and law enforcement during active incidents. Clear communication shortened resolution time.

Self-Directed IT Support

Friends and Family | Ongoing

- Ten-plus years resolving hardware, software, and connectivity issues across Windows, Android, and iOS devices. PC builds, OS reinstalls, malware removal, driver updates, and home network troubleshooting.

LABS AND PROJECTS

TryHackMe

2024 - 2025 | Notes documented in portfolio

- Completed modules on Linux fundamentals, Windows administration, log analysis, Wireshark packet inspection, and Splunk. Wrote up findings and takeaways for each one.
- Windows Forensics: MFT and Prefetch parsing with EZtools, registry navigation, UAC, basic artifact recovery.
- Domain hijack investigation and Metasploitable 2 exploit lab documented in portfolio with methodology and findings.

GitHub: Cybersecurity Acronyms Reference Tool

Live at reddogdevonte.github.io

- Built and deployed a searchable reference tool for cybersecurity terminology on GitHub Pages. Useful for new analysts getting up to speed on domain vocabulary.

CERTIFICATIONS AND EDUCATION

ISC2 Certified in Cybersecurity (CC) Earned

Google Cybersecurity Professional Certificate Earned

CompTIA Security+ In progress via Per Scholas

Splunk Core Certified User In progress via Per Scholas

Per Scholas Chicago, Cybersecurity Program May 2025 cohort, in progress
